

How to install the R package “rd.categorical”?

1. Unzip the folder rd.categorical.zip to a parent directory, e.g. “.../Desktop”
 2. In R, set the working directory as “.../Desktop”
 3. Run the following lines in R

```
library("devtools")
install("rd.categorical")
library("rd.categorical")
```
 4. The package “rd.categorical” is ready to use.
-

After the package is installed (following steps above), type

```
> ?rd.mnl
```

You will then see details about how to use the key command rd.mnl. In the last section “Example” of the description, I demonstrate the use with a simulated dataset.
